DESIGN ENGINEER [Freelance](#)

2023 - 2025

Client Work

- Built custom websites in HTML, CSS, JavaScript, TypeScript, and React, improving client site performance by up to 50%.
- Integrated 3rd-party plugins and bespoke JavaScript into Squarespace sites, expanding client functionality without costly platform migrations.
- Implemented responsive, SEO-friendly structures with semantic HTML—leading to average client SEO score increases of 20+ points on Google Lighthouse.
- Delivered hands-on CMS training, enabling 100% of clients to self-manage content updates post-launch.

Personal Project

- Designed and built a responsive tabletop RPG dice roller used in production by an active gaming community.
- Developed reusable, component-driven UI using React, with clean, semantic HTML and CSS for accessibility and maintainability.
- Implemented custom logic and state management to model complex RPG mechanics, achieving accurate simulation with zero reported calculation bugs.
- Deployed via Netlify with serverless functions simulating backend logic, enabling 100% uptime since launch.

LEAD PRODUCT DESIGNER [Sana Benefits](#)

2022 - 2025

- Partnered daily with engineering to resolve complex layout and styling issues, delivering in-code animation prototypes that cut development time by 25%
- Led design and implementation of updated Figma library, reducing design-engineering handoff friction and enabling engineers to self-serve.
- Led UX/UI for a custom EMR + asynchronous care platform, building a key differentiator for the company and setting the stage for long-term strategic growth.

SR PRODUCT DESIGNER II [Eden Health](#)

2022

- Defined success metrics for a new telehealth MVP; collaborated with data teams to instrument tracking and validate feature adoption.
- Refactored the design component library and partnered with engineering to align with a new Storybook library, reducing inconsistencies by 90%.
